

## Senior Software Developer

**DEPARTMENT:** International Multi-Channel

**STATUS:** Full Time position

### Position Summary

Within GameStop, we own and build large-scale cloud-based distributed applications serving 20,000+ requests per minute, order management and customer service applications shipping thousands of orders per day, internal and public APIs, and a loyalty program with millions of members.

GameStop is looking for a Senior Software Developer to join our International Multi-Channel team. Based in Swords, Dublin and reporting to one of our Development Managers, you will be joining an experienced team of talented developers to integrate new features and extend the capabilities of our existing ecommerce platform used across Europe and Canada. We work in the latest technologies; offer a competitive salary, great benefits, and a relaxed work environment.

### Duties and Key Responsibilities

- Designing, developing, and deploying web applications in ASP.NET MVC and Angular.
- Implementing sensible, responsive, and easy to use web interfaces for desktop, tablet, and mobile.
- Ensuring code released to production is stable, performant, scalable, flexible, and secure.
- Working with customers and stakeholders to understand their needs and requirements.
- Participating in Agile activities like planning, estimating, demos and retros.
- Providing design documentation, release notes and test plans.
- Working with QA, Support, and Infrastructure engineers to investigate and resolve application issues.

### Education and Experience

- IT or related degree.
- 5 years' experience developing enterprise web applications in ASP.NET MVC.
- Experience in web technologies, like HTML/CSS and jQuery.
- Previous experience with AWS or another cloud provider.
- Knowledge of continuous delivery principles like version control, unit and automation tests, and automated deployments.
- Passionate about developing excellent products, growing your skills, and interested in SOLID development, service orientated architecture practices and micro services.
- Good communication skills including an ability to express yourself to technical and non-technical people.
- Ability to multi-task, work independently or as part of a team.
- Staying up to date with current trends and being able to translate them into suggestions and new ideas for our software and the way we work.
